MEMBER BEARING DIMENSION CATALOG 699

# TIMKEN

WORLDWIDE LEADER IN BEARINGS AND STEEL

# BEARING DIMENSION CATALOG

## INCLUDES:

- EXPLANATION OF TIMKEN® BEARING SYMBOLS
- BEARING DIMENSIONS BY PART NUMBER
- BEARING DIMENSIONS BY CORE BORE

## BEARING COMPONENTS ARE SHOWN IN BOTH METRIC AND INCH UNITS.

For each part number the top line is millimeters, bottom line is inches.

## BEARING COMPONENT WEIGHTS ARE SHOWN IN BOTH METRIC AND POUND UNITS.

For each part number the top line is kilograms, bottom line is pounds.

## NOT TO BE USED AS A DESIGN MANUAL

This is not a manual for the selection of bearings for new applications. Whenever it is necessary to select Timken bearings for new applications consult the Bearing Selection Handbook or get in touch with the nearest office of The Timken Company.

Every effort has been made to ensure that the data listed in this catalog is correct. However, we cannot assume responsibility for possible error.

## WARNING!

### **Failure to observe the following warnings could lead to a risk of serious bodily harm:**

- Never spin a bearing with compressed air. The rollers may be forcefully expelled.
- If a hammer and bar are used for bearing removal, fragments from the hammer, bar, or the bearing can be released with high velocity.  
*NOTE: A mild steel bar is preferred since it is less susceptible to fragmenting.*
- When installing or removing bearings, always wear safety glasses or goggles.

### **Failure to observe the following instructions can result in equipment failure leading to a risk of serious bodily harm:**

- Proper maintenance and handling practices are critical. Follow installation instructions and maintain proper lubrication.
- Do not attempt to disassemble unitized bearings. Components may be damaged.
- Do not use a damaged bearing.
- Do not mix parts of matched assemblies. Bearing damage could result.

Actual bearing performance is affected by many factors beyond the control of The Timken Company. Therefore, the feasibility of all bearing applications should be validated by the customer. The data contained in this guide is intended for reference purposes and will assist you in part number and external bearing dimension identification.

## TAPERED ROLLING BEARING – BASIC DESIGN

Considering the performance demands placed on tapered roller bearings, it's rather amazing how simple the basic design really is. Timken tapered roller bearings minimize friction because of the interrelationship of the bearing's four basic parts:

- The inner ring, or cone, is mounted onto the shaft.
- The outer ring, or cup, sits in the housing (hub).
- The tapered rollers, or rolling elements, allow relative motion between the cone and cup thus minimizing friction between the two.
- The cage, or separator, spaces and holds the rolling elements in the proper position.
- The races are the surfaces on the cup and cone where the rolling elements make contact.

The tapered roller bearing's most important dimensions are:

- The outside diameter of the outer ring, or cup, is known as the O.D. (D). The other basic dimension of this part is the cup width (C). Both are important for fitting the bearing onto the housing.
- The inside diameter of the inner ring, or cone is called the bore (d). This diameter must be correct in order to fit the bearing onto the shaft. The other basic dimension of this part is the cone width (B).
- When cup and cone are mated (including rollers and cage), the overall dimension is called the overall bearing width (T).

Bearing components or assemblies must be in alignment. Their fit onto a shaft or within a housing must be square or in alignment by checking:

- The maximum shaft radius (R), which allows the cone backface to make contact with the shoulder of the shaft.
- The maximum housing radius (r), which allows the cup backface to make contact with the shoulder of the housing.

## TAPERED ROLLER BEARINGS – SPACER ASSEMBLIES

### Spacer Bearing Assemblies

Spacer bearing assemblies speed up bearing installation time because there is no need for bearing adjustment. Spacer bearing assemblies are suitable for use with two-row and four-row Timken® tapered roller bearings to preset the bench lateral (bench end play). Most matched bearing assemblies have serial numbers to ensure correct installation sequence.

Timken spacer bearings are precisely ground to provide the exact bench lateral required for the particular bearing application.

**Since each spacer is custom-fitted to a particular set of components, a spacer cannot be used with any other bearing components – even if they carry the same part numbers.**

**When ordering replacement bearing assemblies, specify:**

- cone number
- assembly number.

**If you do not have the assembly number, specify the component part numbers including:**

- cone number
- cup number
- spacer number
- bench end play, which is etched on the spacer.

**If you do not have any part numbers for the spacer assembly, specify:**

- Name of equipment
- Model number
- Year
- Application position of the bearing.

**WARNING: Always follow manufacturer's instructions. Failure to follow all instructions and to properly lubricate the bearing can cause equipment failure, creating a risk of serious bodily harm.**

**Over-filling or under-filling a wheel hub with lubricant may result in premature component failure. Creating a risk of serious bodily harm.**

**Never spin a bearing with compressed air. The rollers may be forcefully expelled, creating a risk of serious bodily harm.**

**DO NOT MIX PARTS.**

### Tapered Double Outer (TDO)

This diagram depicts the way spacers are used between the cone front faces in the TDO bearing. The spacer fits between the two single cones.

### Tapered Double Inner (TDI)

Here is an example of how spacers are used between the cup front faces in the type TDI bearing. The spacer fits between the two single cups.

**This guide contains the basic information for most general-use parts in production by The Timken Company. The data contained within this guide is intended for reference purposes and will assist you in part number and external bearing dimension identification.**

**What you will find**

- Cup and cone combinations are grouped by series designation. Dimensional information, inch and metric form, is provided for each cup and cone combination and includes the following:

NOMENCLATURE	DIMENSION SYMBOL
• bore size	“d”
• outside diameter (O.D.)	“D”
• bearing width	“T”
• cone width	“B”
• cup width	“C”
• shaft and housing max fillet radii	“R” for cones – “r” for cups
• bearing weight	

- Where additional characteristics are important to differentiate between parts, the part number is preceded by an asterisk (\*). These characteristics are available in the remarks column.

**How to find part numbers**

- **If you know the part number**, use the index to locate the section where you will find the part. Once in that section, series are arranged in ascending order.
- **If you only know the cone bore dimension**, use the section titled BEARING DIMENSION BY CONE BORE to find an appropriate series.

## TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES

PREFIX	SUFFIX	CONE OR CUP	EXPLANATION
A		Cone & Cup	Standard basic series part number.
	A	Cone	Different bore from basic part number.
	A	Cone	Different complement of rollers.
	A	Cone	Different radius from basic part number.
	A	Cup	Different OD from basic part number.
	A	Cup	Different radius from basic part number.
	A	Cup	Different width from basic part number.
	AA	Cone & Cup	Different bore, OD, width, or radius from basic part number.
	AB	Cone	Different bore, width, or radius from basic part number, assembled with brass cage.
	AB	Cup	Flanged cup. (Non-interchangeable with basic part number.)
	AC	Cone	Different bore or radius, different internal geometry.
	AC	Cup	Different OD, width, or radius from basic part number.
	AD	Cup	Double cup. (Non-interchangeable with basic part number.)
	ADW	Cone	Double cone. Pilots and slots each end, holes in large rib.
	AH	Cone	Assembled with special cage, rollers, and/or Duo-Face internal geometry. (Non-interchangeable with basic part number.)
	AL	Cone	Assembled with Duo-Face seal.
	ARB	Cup	Single cup with snap ring groove in OD.
	AS	Cone & Cup	Different bore, OD, width, or radius from basic part number.
	ASB	Cone	Single cone, different bore or width from basic part number, assembled with brass cage.
	AV	Cone & Cup	Made of special steel.
	AW	Cone & Cup	Keyway or slotted cone or cup.
	AX	Cone & Cup	Different bore, OD, width, or radius from basic part number.
	AXB	Cone	Different bore, width, or radius from basic part number, assembled with brass cage.
	AXD	Cup	IsoClass cup - double cup without oil holes or groove.
	AXV	Cone & Cup	Different OD, width, or radius from basic part number. Made of special steel.
	AXX	Cone & Cup	Different OD, width, or radius from basic part number. Made of special steel.
	B	Cup	Flanged cup. (Non-interchangeable with basic part number.)
	B	Cone & Cup	IsoClass bearing with same boundary dimensions as basic part number, but with different internal geometry, steeper included cup angle.
	BA	Cup	Flanged cup. (Non-interchangeable with basic part number.)
	BNA	Cone	IsoClass cone used in assemblies with 2 cones mated with double cup to form a double row non-adjustable bearing. (Non-interchangeable with other cones having the same basic part numbers which may vary in bore or width dimensions.)
	BR	Cup	Single cup with groove in OD for snap ring.
	BS	Cup	Flanged cup. (Non-interchangeable with basic part number.)
	BW	Cup	Flanged cup with slot. (Non-interchangeable with basic part number.)
	BXX	Cup	Flanged single cup. Made of special steel.
	C	Cone	Single cone, envelope dimensions same as basic part number, different internal geometry.
	C	Cup	Dimensionally different from basic part number. (Non-interchangeable).
	CA	Cone	Single cone, envelope dimensions same as basic part number, different internal geometry.
	CB	Cone	Single cone, dimensionally different from basic part number.

## TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES

PREFIX	SUFFIX	CONE OR CUP	EXPLANATION
	CD	Cup	Double cup with oil holes and groove. One hole counter-bored for locking pin.
	CE	Cup	Dimensionally different from basic part number. (Non-interchangeable.)
CN		Cup	Neoprene cushioned cup.
	CP	Cone & Cup	Flash chrome plated. Otherwise, interchangeable with basic part number.
	CP	Cone & Cup	Envelope dimensions same as basic part number, different internal geometry, customized for performance.
	CR	Cone & Cup	Ribbed cup bearing series.
	CS	Cone & Cup	Dimensionally different from basic part number. (Non-interchangeable.)
	CX	Cone	Dimensionally different from basic part number. (Non-interchangeable.)
	D	Cone & Cup	Double cone or Double cup. (Non-interchangeable with basic part number.)
	DA	Cone	Double cone. (Non-interchangeable with cones having same basic part number.)
	DA	Cup	Spherical OD double cup. (Non-interchangeable with basic part number or other double cups having same basic numbers.)
	DB	Cup	Double cup with flange. (Non-interchangeable with basic part number or double cups having same basic numbers.)
	DB	Cone	Double cone assembled with brass cages.
	DC	Cup	Double cup with hole for locking pin.
	DD	Cone & Cup	Special long double cone or cup. (Non-interchangeable with basic part number or other double parts having same basic numbers.)
	DE	Cone & Cup	Double cone or double cup having different dimensions or other characteristics from single and double parts identified with same basic part number.
	DF	Cup	Double cup with oil holes and groove. Snap ring groove on OD.
	DG	Cone	Double cone with groove in bore.
	DGW	Cone	Double cone with pressure removal groove in bore, and having face slots.
	DH	Cone	Double cone with special cage, rollers, and/or internal geometry. (Non-interchangeable with basic part number.)
	DP	Cone	Double cone with puller groove.
	DR	Cup	Double cup for ribbed cup series. (Non-interchangeable with single and double cups identified with same basic part number.)
	DRB	Cup	Double cup with snap ring groove.
	DS	Cup	Crowned OD double cup. (Non-interchangeable with other cups having same basic part numbers.)
	DT	Cup	Tapered OD double cup. (Non-interchangeable with other cups having same basic part numbers.)
	DV	Cone & Cup	Double cone or double cup made of special steel.
	DVH	Cone	Double cone, special steel, and/or internal geometry. (Non-interchangeable with basic part number.)
	DW	Cone & Cup	Double cone or double cup with keyway or slot. (Non-interchangeable with cones or cups identified with same basic part numbers.)
	DWA	Cone	Double cone with one end extended and with oil slots in extended end.
	DWH	Cone	Double cone with oil slots, assembled with special cage, rollers, and/or internal geometry. (Non-interchangeable with basic part number.)
	DWV	Cone & Cup	Double cone or double cup with keyway or slot. (Non-interchangeable with cones or cups identified with same basic part numbers.) Made of special steel.

## TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES

PREFIX	SUFFIX	CONE OR CUP	EXPLANATION
	DX	Cup	Adaptor for spherical or straight OD cup.
	DXX	Cone & Cup	Double cone or double cup made of special steel.
	E	Cone & Cup	Cones or cups having special characteristics differing from and non-interchangeable with other cones or cups identified with the same basic part numbers.
	ED	Cup	Double cup. (Non-interchangeable with other cups identified with same basic part numbers.)
	EDC	Cup	Double cup, special hole in OD for locking pin.
EE		Cone	Large and small ribs - close guided rollers. (Non-interchangeable with other cones identified with same basic part numbers.)
EH		Cone & Cup	Extra heavy series.
EL		Cone & Cup	Extra light series.
EX		Cone & Cup	Experimental.
	EXX	Cone & Cup	Cones or cups having special characteristics differing from and non-interchangeable with other cones or cups identified with the same basic part numbers. Made of special steel.
	F	Cone	Assembled with polymer cage.
FL		Cone & Cup	"Free lateral" series, no large or small ribs.
FX		Cone & Cup	Factory identification number only.
	G	Cone	Retainer groove in bore.
H		Cone & Cup	Heavy series. (Non-interchangeable with other cones and cups identified with same basic part numbers.)
	H	Cone	Assembled with special cage, rollers, and/or internal geometry. (Non-interchangeable with basic part number.)
	HV	Cone	Assembled with special cage, rollers, and/or internal geometry. Made of special steel. (Non-interchangeable with basic part number.)
HH		Cone & Cup	Heavy-Heavy series. (Non-interchangeable with other cones and cups identified with same basic part numbers.)
HM		Cone & Cup	Heavy-Medium series. (Non-interchangeable with other cones and cups identified with same basic part numbers.)
	HP	Cone	Assembled with special cage and/or roller, different internal geometry. Customized for performance. (Non-interchangeable with basic part number.)
	HR	Cup	Special cup used on "Hydra-Rib" bearing. (Non-interchangeable with basic part number.)
J		Cone & Cup	Used alone or with other prefix letters to indicate metric bore and/or OD.
JC		Cone & Cup	Metric Series.
JD		Cone & Cup	Metric Series.
JE		Cone & Cup	Metric Series.
JF		Cone & Cup	Metric Series.
JG		Cone & Cup	Metric Series.
JN		Cone & Cup	Metric Series.
JP		Cone & Cup	Metric Series.
JR		Cone & Cup	Metric Series.
JRM		Cone & Cup	Metric Series, UNIPAC™ bearing.
JS		Cone & Cup	Metric Series.
JT		Cone & Cup	Metric Series.
JU		Cone & Cup	Metric Series.
JW		Cone & Cup	Metric Series.
K		Cup	Double cup with heavy section. May have unusual feature such as flange. (Non-interchangeable with basic part number.)

## TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES

PREFIX	SUFFIX	CONE OR CUP	EXPLANATION	
L	KP	Thrust Bearing Cone & Cup	Cadmium plated. Light series. (Non-interchangeable with other cones and cups identified with same basic part numbers.)	
	L	Cone	Cone assembled with Duo-Face seal.	
	L	Cup	Loose rib. (Part of Unit-Bearing.)	
	LA	Cone	Cone assembled with Duo-FaceX seal and with "O" ring groove in bore.	
	LA, LB,	Seal	These suffixes are used on a basic Duo-Face-Plus seal number to identify the assembly resulting from the use of the seal various cones in the series.	
LL		Cone & Cup	Light-Light series.	
LM		Cone & Cup	Light-Medium series.	
M		Cone & Cup	Medium series.	
N		Cone	Bock or Gilliam type bearings.	
NA	NA	Cone	Two cones mated with double cup to form double row non-adjustable bearing. (Non-interchangeable with other cones having same basic part numbers which may vary in bore, OD, and width dimensions.)	
	NA	Cup	Etched electric pencil or double cups mated with two "NA" type single cones to form double row non-adjustable bearings.	
	NAV	Cone	"NA" cone made of special steel.	
	NC	Cup	Cushioned cup (usually neoprene).	
	NI	Cup	Tapered or threaded bore.	
	NP		Cone & Cup	Used with random numbers for product differentiation.
		NR	Cone	"NA" type ribless cone for ribbed cup series.
	NW	Cone	"NA" type cone with slotted front face.	
	NWV	Cone	"NA" type cone with slotted front face. Made of special steel.	
	NX	Cone	Lapped front face.	
	P	Cone	Puller groove.	
R	P	Cone & Cup Cone & Cup	Customized for performance. Gilliam replacement series. (Non-interchangeable with other cones and cups identified with same basic numbers.)	
	R	Cone & Cup	Special feature bearing. (Non-interchangeable with bearings having the same basic part numbers.)	
	R	Cone & Cup	Bock type bearing.	
	R	Cone	Basic part number with polymer lubricant.	
RC	RB	Cup	Snap ring on OD.	
		Cone & Cup	Special ribbed cup bearing.	
	RN	Various	Used with random numbers, not to exceed six (6) digits, for purchased items that are distributed by Timken.	
	RR	Cone & Cup	"Relieved race."	
	S	Cone & Cup	Special feature bearing. (Non-interchangeable with bearings having same basic part numbers.)	
	SA	Cone & Cup	Special feature bearing. (Non-interchangeable with bearings having same basic part numbers.)	
	SB	Cone	Assembled with brass cage. (Non-interchangeable with basic part number.)	
	SB	Cup	Flanged cup. (Non-interchangeable with basic part number.)	
	SC	Cone	With square bore. (Non-interchangeable with basic part number.)	
	SD	Cone & Cup	Double cone with square bore or double cup. (Non-interchangeable with basic part number.)	
	SH	Cone	Special feature bearing, with special cage, rollers, and/or internal geometry. (Non-interchangeable with bearings having same basic part numbers.)	

## TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES

PREFIX	SUFFIX	CONE OR CUP	EXPLANATION
	SL	Thrust Bearing	Basic part number with polymer lubricant.
	SR	Cone	Different radius from basic part numbers.
	SW	Cone & Cup	Slot or keyway. (Non-interchangeable with bearings having same basic part numbers.)
	SWB	Cone	Slot or keyway assembled with brass cage. (Non-interchangeable with bearings having same basic part numbers.)
	SWV	Cone	Slot or keyway made of special steel. (Non-interchangeable with bearings having same basic part numbers.)
	SX	Cup	Special feature bearing. (Non-interchangeable with bearings having same basic part numbers.)
T		Race	Thrust bearing assemblies.
T		Cup	Double cup with heavy section. May have unusual feature such as flange, tapered OD, etc.
	T	Cone	Tapered bore. (Non-interchangeable with basic part number.)
	T	Cup	Tapered OD. (Non-interchangeable with basic part number.)
	TA	Cone	Tapered bore "NA" type cone. (Non-interchangeable with basic part number.)
	TA	Cup	Tapered OD. (Non-interchangeable with basic part number.)
	TB	Cone	Tapered bore cone with brass cage. (Non-interchangeable with basic part number.)
TC		Race	Thrust bearing assembly.
	TC	Cone	Tapered bore. (Non-interchangeable with basic part number.)
	TD	Cone	Double with tapered bore. (Non-interchangeable with basic part number.)
	TDB	Cone	Double with tapered bore, assembled with brass cages. (Non-interchangeable with basic part number.)
	TDE	Cone	Double with tapered bore and extended rib. (Non-interchangeable with basic part number.)
	TDG	Cone	Double with tapered bore, groove in bore. (Non-interchangeable with basic part number.)
	TDGV	Cone	Double with tapered bore, groove in bore. Made of special steel. (Non-interchangeable with basic part number.)
	TDH	Cone	Double with tapered bore, special cage, rollers or internal geometry. (Non-interchangeable with basic part number.)
	TDL	Cone	Double with tapered bore, interlock feature. (Non-interchangeable with basic part number.)
	TDV	Cone	Double with tapered bore. Made of special steel. (Non-interchangeable with basic part number.)
	TDW	Cone	Double with tapered bore and slots or keys. (Non-interchangeable with basic part number.)
	TDXX	Cone	Double with tapered bore. Made of special steel. (Non-interchangeable with basic part number.)
	TE	Cone	Single, tapered bore, extended large rib. (Non-interchangeable with basic part number.)
	TEV	Cone	Single, tapered bore, extended large rib. Made of special steel. (Non-interchangeable with basic part number.)
	TL	Cone	Tapered bore with interlock feature. Non-interchangeable with basic part number.)
	TLE	Cone	Tapered bore with interlock feature and extended rib. (Non-interchangeable with basic part number.)
	TP	Cone	Tapered bore cone with puller groove. (Non-interchangeable with basic part number.)

**TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES**

<b>PREFIX</b>	<b>SUFFIX</b>	<b>CONE OR CUP</b>	<b>EXPLANATION</b>
	TPE	Cone	Tapered bore cone with puller groove, extended large rib. (Non-interchangeable with basic part number.)
	TPV	Cone	Tapered bore cone. Made of special steel. (Non-interchangeable with basic part number.)
	TW	Cone & Cup	Tapered bore cone or cup OD with slots or keys. (Non-interchangeable with basic part number.)
	TWE	Cone & Cup	Tapered bore cone or cup OD with locking keyway in front face, extended larger rib. (Non-interchangeable with basic part number.)
	TXX	Cone	Tapered bore. Made of special steel. (Non-interchangeable with basic part number.)
U		Cone & Cup	Basic series part number, unitized, self-contained.
	U	Cone & Cup	Basic series part number, unitized, self-contained.
	US	Cone & Cup	Special close stand.
V		Cone & Cup	Special close stand.
	V	Cone & Cup	Made of special steel.
	VC	Cone	Special internal geometry. Made of special steel. (Non-interchangeable with basic part number.)
	VH	Cone	Special cage, rollers, and/or internal geometry. Made of special steel. (Non-interchangeable with basic part number.)
	W	Cone & Cup	Slot(s) or keyway(s).
	W	Thrust Bearing	Oil holes in retainer.
	WB	Cone	Slot(s) or keyway(s) with brass cage.
	WC	Cone	Slot(s) or keyway(s).
	WD	Cone	Double cone with slot(s) or keyway(s).
	WE	Cone & Cup	Extended face with slot(s) or keyway(s). (Non-interchangeable with basic part number.)
	WS	Cone & Cup	Slot(s) or keyway(s).
	WV	Cone & Cup	Slot(s) or keyway(s). Made of special steel.
	WXX	Cone & Cup	Slot(s) or keyway(s). Made of special steel.
X		Cone	IsoClass part number.
	X	Cone	Slot(s) or keyway(s).
	X	Cone & Cup	Special feature bearing. (Non-interchangeable with bearings having the same basic part number.)
	X	Cone & Cup	IsoClass bearing with same boundary dimensions as basic part number but with different internal geometry, yielding increased rating.
	XA	Cone & Cup	Special feature bearing. (Non-interchangeable with bearings having the same basic part number.)
XAA		Cone	IsoClass single cone. (Non-interchangeable with bearings having the same basic part number.)
XAB		Cone	IsoClass single cone. (Non-interchangeable with bearings having the same basic part number.)
	XB	Cone	Different bore, width, or radius, from basic part number. Assembled with brass cage. (Non-interchangeable with basic part number.)
	XB	Cup	Special feature flanged cup. (Non-interchangeable with bearings having the same basic part number.) (Non-interchangeable with basic part number.)
XC		Cone & Cup	Limited production bearings to which standard series part numbers have not been assigned.
	XD	Cup	Double cup, no oil holes or groove.
	XD	Cone	Double cone, different bore or width from basic part numbers. Double cone, oil holes in large rib.

## TAPERED ROLLER BEARING PART NUMBER PREFIXES AND SUFFIXES

PREFIX	SUFFIX	CONE OR CUP	EXPLANATION
	XDXP	Cup	Double cup, no oil holes or groove, special material and process.
	XE	Cup	Different bore, width, or radius from basic part number.
XGA		Cone	IsoClass single cone. (Non-interchangeable with bearings having the same basic part number.)
XGB		Cone	IsoClass single cone. (Non-interchangeable with bearings having the same basic part number.)
	XP	Cone	Special steel and process.
XR			Crossed roller bearing series.
	XS	Cone & Cup	Different bore, width, or radius from basic part number.
	XS	Cone	Double.
	XV	Cone & Cup	Special feature cone or cup made of special steel.
	XW	Cone	Slotted.
	XX	Cone & Cup	Single cone or single cup. Made of special steel.
Y		Cup	IsoClass part number.
	YD	Cup	Double cup with oil holes, no groove. (Non-interchangeable with basic part number.)
	YDA	Cup	Double cup with oil holes, no groove. (Non-interchangeable with bearings having the same basic part number.)
	YDV	Cup	Double cup with oil holes, no groove. Made of special steel.
	YDW	Cone	Double cup with oil holes, no groove. Slot(s) or keyway(s) in face(s).
	YKA	Cup	IsoClass single cup. (Non-interchangeable with bearings having the same basic part number.)
YKB		Cup	IsoClass single cup. (Non-interchangeable with bearings having the same basic part number.)
YSA		Cup	IsoClass single cup. (Non-interchangeable with bearings having the same basic part number.)
	Z	Cone & Cup	Close stand part.

**INTRODUCTION**

Mounting a bearing with the proper fit helps ensure the bearing will function as desired. In general, the rotating race must be mounted with a tight fit. A loose fit is used on a stationary cone or on a double cup, especially at the floating position. Cups mounted in an aluminum housing must have minimum tight fit of .001 times the cup O.D. For magnesium housings, the minimum tight fit must be .0015 times the cup O.D. The fitting practices listed within this catalog are specific to industrial applications. **Automotive bearings** require special fitting practices.

**Precision bearings** require a special fit that depends on the precision class of the bearing used. In addition to the proper fit and bearing alignment, the desired accuracy of the spindle, cup and cone seat roundness, and square backing shoulders for both the cup and the cone are very critical. Less than desirable spindle runout will likely result if any of these areas are out of tolerance. A complete discussion showing recommended fits, cup seat and cone seat roundness and backing squareness is found in the booklet "Timken Bearings For Machine Tools".

**Rolling mill bearings** also require special fitting practices depending on the type of bearing involved. Refer to the Timken booklet "Rolling Mill Bearings" for a complete discussion of fitting practices.

**MACHINED SURFACE FINISHES FOR SHAFTS AND HOUSINGS**

The cup and cone seats should be smooth and within specified tolerances for size, roundness and taper. Ground finish is usually recommended for shafts whenever possible. The recommended finish for ground and turned surfaces is as follows:

- Cone seats - ground 63 micro-inches AA (maximum) (1.6 micrometer).
- Cone seats - turned 125 micro-inches AA (maximum) (3.2 micrometer).

If the bearing seat finishes are rougher than these limits, there is not enough contact area and the fit will loosen easily, especially if the race is pressed on and off several times.

The following tables show machined finishes for shafts and housings and the recommended fitting practice for both inch and metric sizes.

**INCH SYSTEM BEARINGS

## THE TIMKEN® ISOCLASS™ BEARING SPECTRUM

### Standard IsoClass Bearings

The 30000 series bearings included in the original ISO/R 355 standard, often referenced as DIN720, now constitute the core of the IsoClass line of metric bearings.

### Customized IsoClass Bearings

Modified and flanged IsoClass bearings are indicated by prefixes and/or suffixes to the basic part number. These bearings are not interchangeable with bearings sharing the same basic part number.

IsoClass Spacer Assemblies

### IsoClass Spacer Assemblies

A wide range of spacer assemblies is available for numerous applications in the original-equipment and replacement markets.

Most single-row standard IsoClass bearings can be supplied as a two-row, pre-set, ready-to-fit assembly by adding spacers machined to pre-determined dimensions and tolerances.

For details, please contact your Timken sales representative.

### Modified IsoClass Bearings

Timken has developed modified ISO 355 bearing designs to meet specific application requirements. These bearings have a modified external configuration or internal geometry.

### Flanged IsoClass Bearings

A variation on standard IsoClass bearings, the flanged outer race facilitates axial location and accurately aligned seats in a through-bored housing.

10

Original ISO/R 355 Part Numbering System

## ISO STANDARDS

The ISO 355 international metric standard defines dimensions and cup angles for single-row tapered roller bearings. Originally intended to replace the ISO/R 355 standard, the new ISO 355 standard defined additional bearings and created new designation codes for the entire dimensional spectrum of ISO 355 metric bearings.

Because new designation codes would have incurred expense for many manufacturers and users, the market retained the designation codes for bearings that were in accordance with both the old and new standards.

Comparison of ISO bearing designs (55 mm bore diameter)

# AUXILIARY PARTS – CUP SHIMS

## Standard Metal Shims for Cup Adjusted Bearings

Shims are **0.13 mm** (0.005 in.), **0.18 mm** (0.007 in) and **0.51 mm** (0.020 in.) thick

without carrier

with carrier

Carrier section should be equal to average cup wall section.

Suggested shim sets consist of three **0.13 mm** (0.005 in.), three **0.18 mm** (0.007 in), and one **0.51 mm** (0.020 in.) thick shims. When ordering, specify the exact quantity for each part number. Shims shown in this table are made from aluminum.

**Cup Shims**  
part number identifies the following:  
thickness (inches)  
00 00  
example  
K2 06 05 Covers number 6 shim **0.13** (0.005 in.) thick (blue)  
K2 06 07 Covers number 6 shim **0.18** (0.007 in.) thick (silver)  
K2 06 20 Covers number 6 shim **0.51** (0.020 in.) thick (yellow)

These parts have been designed and developed for use with Timken bearings only.

## AUXILIARY PARTS – CUP SHIMS

### Standard Metal Shims for Cup Adjusted Bearings

Shims are **0.13 mm** (0.005 in.), **0.18 mm** (0.007 in) and **0.51 mm** (0.020 in.) thick

without carrier

with carrier

Carrier section should be equal to average cup wall section.

Suggested shim sets consist of three **0.13 mm** (0.005 in.), three **0.18 mm** (0.007 in), and one **0.51 mm** (0.020 in.) thick shims. When ordering, specify the exact quantity for each part number. Shims shown in this table are made from aluminum.

**Cup Shims**  
part number identifies the following:  
shim size thickness (inches)  
K2 00 00  
example  
K2 06 05 Covers number 6 shim **0.13** (0.005 in.) thick (blue)  
K2 06 07 Covers number 6 shim **0.18** (0.007 in.) thick (silver)  
K2 06 20 Covers number 6 shim **0.51** (0.020 in.) thick (yellow)

**These parts have been designed and developed for use with Timken bearings only.**

## AUXILIARY PARTS – LOCKNUTS, LOCKWASHERS, AND TONGUED WASHERS

### Standard Locknut, Lockwasher, and Tongued Washer Assemblies

Figure 1

Figure 2

Figure 3

Figure 4

Figure 5

Figure 6

The designs shown in figures 1 to 6 inclusive show various methods of using standard locknuts, lockwashers, and tongued washers, indicated in the tables on pages 285 through 286. A single locknut and lockwasher can be used to clamp the cone against a sleeve, shown in figure 1, or directly against a shaft shoulder. A narrow spacer is applied between the front face of the cone and the lockwasher so that the lockwasher will clear the bearing cage by a minimum of 3mm (0.12 in). The spacer outside diameter should be made a minimum of 6mm (0.24 in) smaller than the cage inside diameter, but must still provide the recommended cone backing diameter as found in the Timken engineering journal. Figure 2 shows another clamped design using a single locknut and lockwasher with a two-row bearing of either type TDO with cone spacer or type TNA. Since no cage clearance problem is present, the narrow spacer shown in figure 1 is unnecessary.

Figures 3, 4, and 5 indicate an adjustable bearing arrangement using two locknuts and a lockwasher. These may be used with either single or two-row bearing of the types permitting a cone adjusted arrangement. The design in figure 3 allows the maximum shaft extension diameter that can be used with a shaft thread outside diameter, which will be less than the cone

bore. Figure 4 shows an alternate design with smaller thread diameter and corresponding smaller locknuts and lockwasher. The locknut outside diameter, minus 2 times "r" (pages 285 through 286), must not be less than the recommended cone backing diameter as found in the Timken engineering journal. Figure 5 indicates the use of a tongued washer located between the inner locknut and cone. This is intended for applications where the cones are applied with loose fits on hardened stationary shafts as found in many automotive applications. The hardened tongued washers are not sold by The Timken Company.

When space does not permit the use of two locknuts and a lockwasher in an adjustable arrangement, and a single locknut and a lockwasher is used, then a tongued washer must be placed between the cone and lockwasher as illustrated in figure 6. This is necessary to provide adequate backing for the cone, in most cases, and to prevent damage to the lockwasher if the cone should creep on the shaft. The tongued washers are available from The Timken Company.

(1) This standard is applicable to steel nuts. When either the nut or the shaft is made of stainless steel, aluminum, or other material having a tendency to seize, it is recommended that the maximum thread diameter of the shaft, both major and pitch, be reduced by 20% of the listed pitch diameter tolerance.

14

---

The Timken Company has created a family of literature to assist customers in specifying the appropriate bearing for each application and then maximizing its useful life. To assist that effort, reference material has been developed to help bearing selection for a market segment's specific needs, to implement proper maintenance practices and to utilize the full spectrum of design and service solutions.

Please contact your Timken sales representative to receive copies of the following literature:

**MARKET SPECIFIC LITERATURE**

- The Right Solution for the Rolling Mill Industry
- Precision Tapered Roller Bearings for Machine Tools
- Tapered Roller Bearings for Printing Presses

**MAINTENANCE LITERATURE**

- Bearing Maintenance Manual for Transportation Applications
- Bearing Maintenance Manual for Mobile Industrial Equipment
- Bearing Maintenance Manual for General Industrial Equipment
- Bearing Damage Analysis Poster
- Maintaining Quality on TQO Bearings

**PRODUCT-SPECIFIC LITERATURE**

- Aircraft Landing Wheel Bearings
- AP Bearings for Industrial Applications
- AquaSpexx Corrosion-Resistant Bearings
- Bearings Plus Service Kits
- Debris-Resistant Bearings
- Precision Crossed Roller Bearings
- Spexx Performance Bearings
- TNASWH Bearings
- Thrust Bearings

**LITERATURE ON TIMKEN SERVICES**

- Bearing Express
- Gear Express
- Industrial Bearing Services
- Mill Express
- Spacer Assembly Value Express (SAVE)
